1.64 Cr Merchants Pay for Subscriptions; Retention Stays Manual

- **Reported Paytm Scale:** 1.64 Cr subscription merchants (+27L YoY), Rs 7.1L Cr GMV, Rs 2,648 Cr revenue (Reported: Paytm Q2 FY27 release, 26 Oct 2026).
- **Silent Repeat Churn:** Small shops lose an estimated 25% to 35% of repeat buyers yearly without customer-level alerts (Assumption).
- **Dashboard Friction:** Single-counter operators work 12+ hr shifts; SMB BI dashboards see <8% weekly usage (Assumption).
- **Slow Hours & Rush Prep:** In our synthetic Bengaluru ledger, 3 to 5 PM scans fall 70% below peak while weekend rushes risk stockouts.

PaytmAI VyaparVoice (Track 1)

8:30 PM closing-time voice retention & ops copilot for Soundbox + Paytm for Business.

Team SemiTechnical | Kevin Joseph

One 8:30 PM Voice Action, Governed by Deterministic SQL Rules

- **Plain Voice Brief:** Speaks 8:30 PM brief in English, Kannada, or Hindi (KN/HI marked Draft; zero jargon).
- **Synthetic Store Slice:** Sri Krishna Darshini (240 payers, 1,613 scans); flags 48 regulars silent 16 to 38d.
- **Policy & ITT Split:** Filters to 40 DPDP & 14d-cooldown clear buyers: 32 nudged vs 8 silent control.
- **Passes vs Spend Stop:** All 32 nudged get Rs 25 pass (Rs 800 face); hard stop at Rs 300 spend (>10% risk alert).
- **Zero LLM Math:** SQLite computes every rupee and cap; per-visitor cloud sandboxes block paid calls.

TRY LIVE SANDBOX DEMO

https://paytmai-vyaparvoice.onrender.com

Cloud Safeguards Active:
Isolated SQLite session per visitor.
Zero paid API calls on public URL.
Switch Merchant vs Technical View.

Deterministic Core & Keyless Caps Built; Rail Hooks Scoped

- **[BUILT IN STAGE 1] ITT Stats & Atomic Cap Engine:** Fisher exact p, Wilson 95% CIs, allocation-ratio power, atomic BEGIN IMMEDIATE spend stop, 25-thread concurrency test.
- **[BUILT IN STAGE 1] Merchant Copy & Isolation:** Merchant vs Technical View, banned-jargon lint, Evidence Grades A/B/C, per-visitor SQLite sandboxes, ADMIN_TOKEN gate.
- **[BUILT KEYLESS / PENDING LIVE] Sarvam & Caps:** Keyless Bulbul TTS + Saaras STT adapter, mock-server selftest, SHA-256 audio cache, 15%/15% (30% max) fail-closed credit ledger.
- **[PRODUCTION PLAN] Paytm Ecosystem Hooks:** Paytm QR dynamic coupon settlement, 4G Soundbox push audio, WhatsApp Cloud supplier POs, Postgres/Redis.

make preflight : PASS

Zero leaked keys, render.yaml untouched, zero formatting errors, 21/21 QA battery green.

25-Thread Lock : PASS

Simultaneous QR redemptions stop at exact Rs 300 cap; ITT lift invariant when cap binds.

Cloud Sandbox : PASS

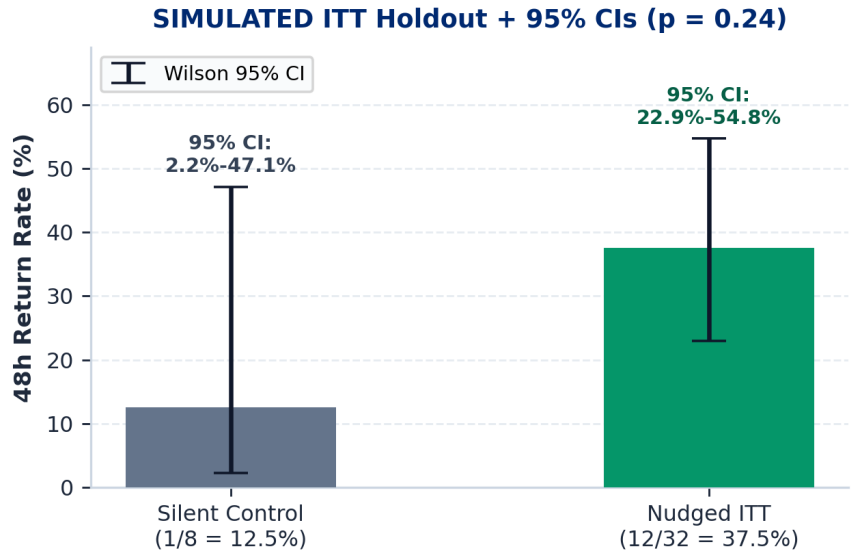

PUBLIC_DEPLOY=true blocks paid APIs; concurrent visitors get isolated SQLite files.

PaytmAI VyaparVoice | Team SemiTechnical (Kevin Joseph)

Intention-to-Treat Holdout, Power & Merchant Net Profit

- **Simulated ITT Return:** 12/32 nudged (37.5%) vs 1/8 control (12.5%); Fisher p = 0.24; simulated 12 equals the Rs 300 cap (0 refused).
- **80% Power Target:** At 80/20 (40/wave): ~31 control + ~124 nudged (155 total, ~4 waves), or 46/arm at 50/50 split.
- **Sales vs Subsidy:** 8 net visits = Rs 1,740 sales (5.8x sales/promo); 4 organic returners absorb Rs 100 cashback.
- **Merchant Net Profit:** At 30% margin: Rs 522 GP (1.74x); +Rs 222 pre-fee (+74%), +Rs 91.50 after Rs 130.50 fee.
- **5% Fee Base:** Rs 130.50 = 5% of all Rs 2,610 redeemed bills (12 bills, including organic returners).

ITT Invariance Verified: Outcomes are drawn before applying the spend stop, so holdout lift stays unchanged if the cap binds.

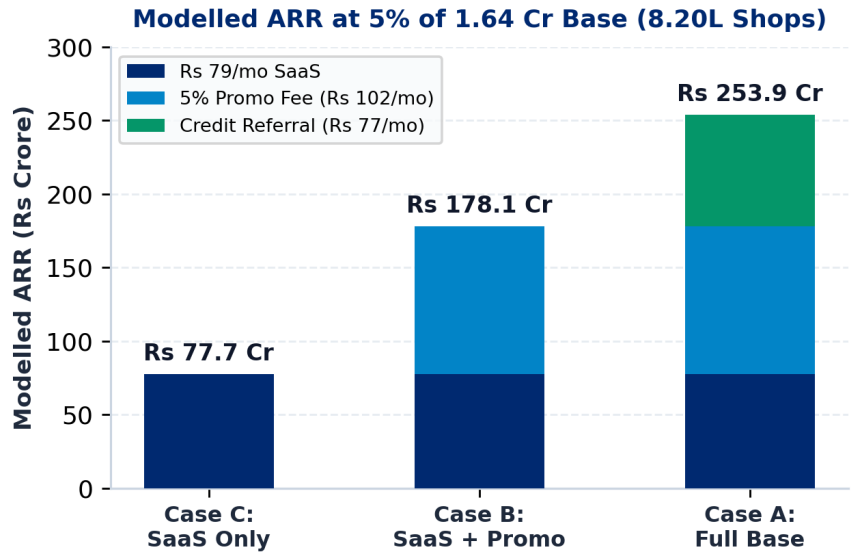

CAP & BREAK-EVEN DISCLOSURE (SIMULATED)

Simulated 12 returners = 12 x Rs 25 = Rs 300 hard spend stop (42.2% overrun risk at p=37.5% triggers >10% alert; suggests Rs 400 cap).

Break-even shop margin: 17.2% pre-fee | 24.7% post-fee.

Three Revenue Cases (5% of 1.64 Cr Q2 Base = 8.20L Shops)

- **Case C (SaaS Only):** Rs 79/mo Soundbox add-on x 8.20L shops = Rs 77.7 Cr ARR (zero promo/credit fees).
- **Case B (Core Excl. Credit):** +Rs 102/mo steady promo fee (~0.78 waves/mo, Rs 2,040 redeemed bills) = Rs 178.1 Cr ARR.
- **Case A (Full Base):** +Rs 77/mo credit referral (~7% loan pen. Assumption) = Rs 253.9 Cr ARR.
- **Unit COGS & Margin:** Rs 48/mo cached (Rs 5 AI + Rs 43 msg; 81.4% margin) vs Rs 71.80 uncached TTS (72.2%).
- **Powered 4-Week Pilot:** 50 Bengaluru shops; 4 waves/shop (~160 >= 155 needed at 80/20) + native KN/HI teach-back.

Fee Reconciliation: Single backlog wave = Rs 130.50 (5% of Rs 2,610); steady state = Rs 102/mo (~0.78 waves/mo as 14d pool refills).

Q2 FY27 BASE & TTS CACHE NOTE

5% of 1.64 Cr subscription merchants (Reported: Paytm Q2 FY27, 26 Oct 2026) = 8.20L shops.

Bulbul v3 = Rs 27/mo uncached (9k chars); ~88% phrase cache hit yields Rs 3.20/mo TTS.

APPENDIX A1 | TRACK 1: MERCHANT GROWTH AI (UPDATED TO PAYTM Q2 FY27)

PaytmAI VyaparVoice

Closing-Time Voice Growth, Operations & Retention Copilot

Built for Paytm's 1.64 Cr subscription-paying merchant deployments (Reported: Paytm Q2 FY27 release, 26 Oct 2026). Combines deterministic SQL segmentation, ITT spend-cap accounting, and plain-language voice briefings.

01 : Plain Voice + Button

EN reviewed + KN/HI draft templates; banned-jargon lint

02 : ITT Cap-vs-Holdout

All 32 nudged get passes; Rs 300 hard spend stop & >10% risk alert

03 : Profit & Power Audit

+Rs 222 pre-fee / +Rs 91.50 post-fee; 31C+124T (80/20) for 80% power

TEAM: SemiTechnical | Member: Kevin Joseph | Live: paytmai-vyaparvoice.onrender.com

Deck v2 Status: Stage 1 verified (stage1-ok); all Q2 FY27, ITT cap, power, and fee reconciliations applied.

Problem Details, Primary Paytm Q2 FY27 Sources & Synthetic Persona

1. Silent Repeat Churn (25% to 35% Yearly - ASSUMPTION)

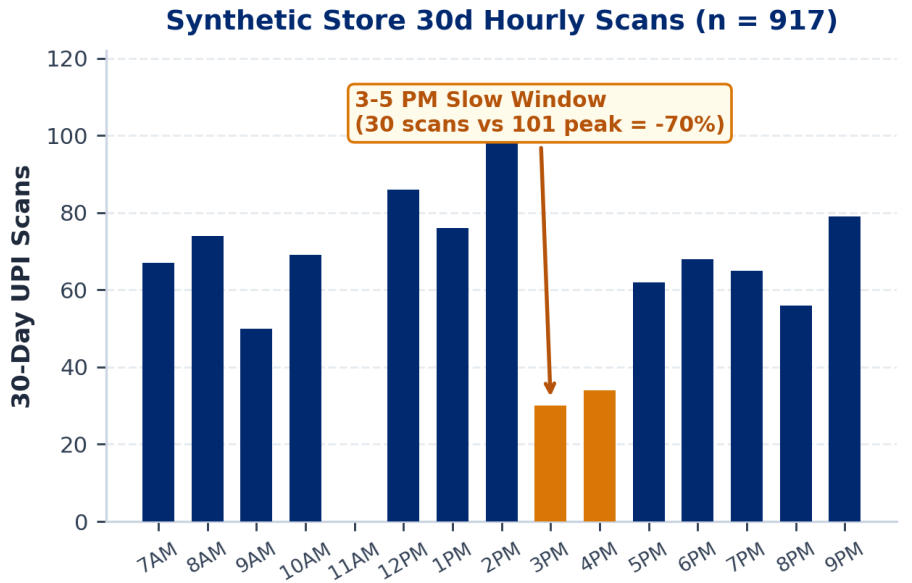

Merchants hear isolated payment alerts without customer-level retention tracking, losing repeat buyers before cashflow drops are noticed.

2. Dashboard Friction (<8% WAU - ASSUMPTION)

Counter-operated kirana, darshini, and pharmacy shops lack time to write prompts, export CSVs, or configure CRM rules.

3. Slow Hours & Rush Prep (SYNTHETIC STORE)

In our 60-day synthetic Indiranagar ledger, 3 to 5 PM scans fall 70% below peak while weekend morning rushes risk staple stockouts.

- **Reported (Paytm Q2 FY27, 26 Oct 2026):** 1.64 Cr subscription merchants, Rs 7.1L Cr GMV, Rs 2,648 Cr rev, 8.8L FS customers, >50% repeat merchant loans.
- **Assumptions vs Synthetic:** ~7% merchant loan pen. & Rs 90-100/mo Soundbox fee (Assumptions); Ramesh Rao store is synthetic (917 scans/30d).

Track 1 Coverage: Growth, Operations, and Customer Recovery

PILLAR 1 : GROW BUSINESS

Retention & Slow-Hour Copilot

- **Churn Detection (Built):** SQL flags regulars silent 16+ days (16-38d in synthetic DB).
- **Slow-Hour Group (Built):** Identifies 3-5 PM snack buyers (55 detected, 34 eligible).
- **ITT Spend Stop (Built):** Issues passes to all nudged buyers; atomic cap stops spend.
- **QR Coupon Hook (Planned):** Production hook into Paytm QR redemption rail.

PILLAR 2 : MANAGE OPERATIONS

Rush Prep & Credit Signals

- **Rush Alert (Simulated):** Flags weekend morning demand spikes from scan history.
- **Supplier PO (Simulated):** Dispatches pre-filled WhatsApp restock (+18L milk, +12kg batter).
- **Dual Ledgers (Built):** Separates merchant cashback stop from 30% Sarvam credit cap.
- **Credit Signal (Planned):** Feeds verified cashflow stability to partner NBFC funnel.

PILLAR 3 : SERVE CUSTOMERS

Privacy-Safe Service Recovery

- **Delay Tagging (Simulated):** Flags peak-hour queue delays and 3-star feedback tags.
- **Goodwill Pass (Simulated):** 1-tap bilingual apology + Rs 30 next-scan coffee voucher.
- **Zero PII Leakage (Built):** No raw phone numbers or payer IDs ever leave SQLite.
- **DPDP & Cooldown (Built):** Hard opt-in filter and 14-day per-payer anti-spam cooldown.

Intention-to-Treat Cap-vs-Holdout Design (Decision 1)

STEP 1 : PASS ISSUANCE

Filter 48 -> 40 eligible (80/20: 32 nudged, 8 control). Issue Rs 25 passes to ALL 32 nudged buyers (Rs 800 face exposure); never restrict reach to 12.

STEP 2 : >10% RISK ALERT

At approval, compute P(Binomial(32, p) > 12). At p=37.5%, overrun risk is 42.2% (>10% threshold): warn merchant and suggest Rs 400 cap (<=10% risk).

STEP 3 : INDEPENDENT DRAW

48h simulator draws customer return visits independently of max_budget first, then applies atomic BEGIN IMMEDIATE stop at Rs 300 (12 paid).

STEP 4 : ITT EVALUATION

Record cap_reached & refused_redemptions (12 = cap, 0 refused in base run; 6 refused at Rs 150 cap). Analyse ITT (32 vs 8): holdout lift is unchanged when cap binds.

DISCLOSED TRADE-OFF & VERIFIED INVARIANCE TESTS

- **Face Exposure vs Hard Spend Stop:** Issuing 32 passes creates Rs 800 face exposure while guaranteeing actual merchant spend stops at Rs 300; late redeemers after #12 are declined and logged in refused_redemptions.
- **Automated Concurrency & ITT Tests:** 25-thread simultaneous scan test verifies budget_spent == Rs 300 (12 paid, 13 refused); multi-seed test proves ITT holdout comparison is identical whether cap is Rs 800 or Rs 100.

Component Status: Built in Stage 1 vs Pending vs Production Plan

TOUCHPOINTS	[BUILT] Merchant & Technical View UI	[BUILT] 1-Tap & Voice Chip Fallback	[PLANNED] Soundbox 4G Push & WhatsApp Cloud
VOICE & LLM	[BUILT] Browser Speech + SHA-256 Cache	[PENDING LIVE] Keyless Sarvam (30% Cap)	[STAGE 2] Keyless Groq Grounded English Q&A
CORE ENGINE	[BUILT] FastAPI + Per-Visitor Sessions	[BUILT] 5-Rule Guardrails + Jargon Lint	[BUILT] ITT Fisher/Wilson/Power + Profit ROI
DATA & OPS	[BUILT] Atomic SQLite Spend-Stop Ledger	[BUILT] Preflight + 25-Thread Stress Test	[PLANNED] PostgreSQL & Redis Cluster

Differentiation vs Manual Khata Apps and Generic Chatbots

Dimension	Manual BI / Khata Apps	Generic LLM Chatbots	PaytmAI VyaparVoice
Merchant UX	Charts & manual ledger entry	Requires typing business prompts	**8:30 PM plain voice brief + 1-tap button**
Customer Graph	Incomplete manual phonebooks	No link to payment history	**Paytm QR repeat-payer IDs (synthetic in MVP)**
Financial Safety	Manual coupon rules	LLM can invent unsafe offers	**Deterministic floor, atomic spend stop & >10% alert**
Privacy (DPDP)	Raw phone lists exposed	Prompt data leakage risk	**SQL opt-in filter; zero PII sent to voice/LLM**
Causal Proof	Vanity message counts	No comparison group	**80/20 ITT holdout + Wilson CIs + net profit ROI**

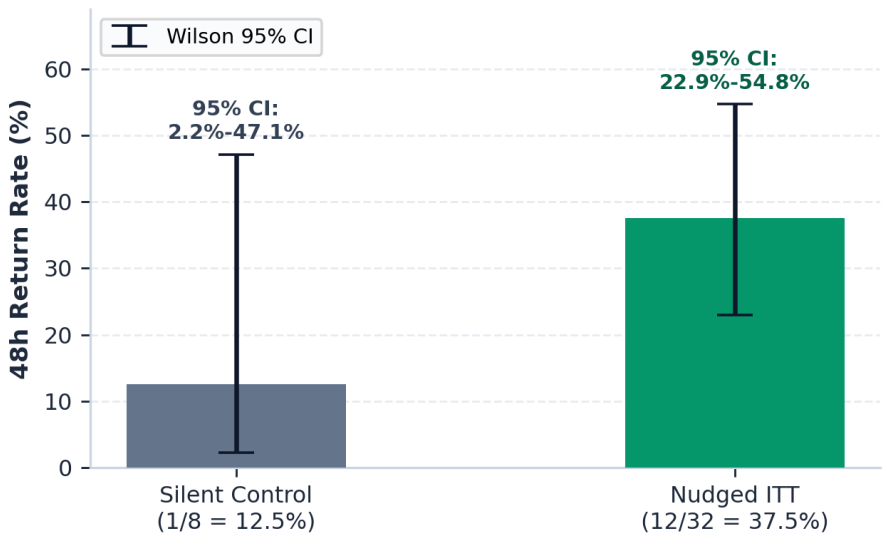

Hypothesized Pilot Targets vs Simulated ITT Metrics

MERCHANT METRICS (SIMULATED MVP & PILOT TARGETS)

- **Simulated Profit ROI:** +Rs 222 pre-fee (+74%) / +Rs 91.50 post-fee at 30% margin (simulated 12 = Rs 300 cap).
- **Repeat Visit Target:** +14% to +22% monthly repeat visits (PILOT TARGET - unvalidated).
- **Waste Reduction Target:** -18% afternoon perishable loss (PILOT TARGET - unvalidated).

PAYTM ECOSYSTEM HYPOTHESES (PILOT TARGETS)

- **Device Retention:** -35% Soundbox churn reduction (PILOT TARGET - unvalidated).
- **Store QR Share:** +12% to +15% store Paytm QR GMV lift (PILOT TARGET - unvalidated).
- **Credit Funnel:** Expand ~7% merchant loan pen. (ASSUMPTION) toward 15% (LONG-TERM TARGET).

1.74x

Gross Profit / Promo
(30% Margin Sim.)

31C + 124T

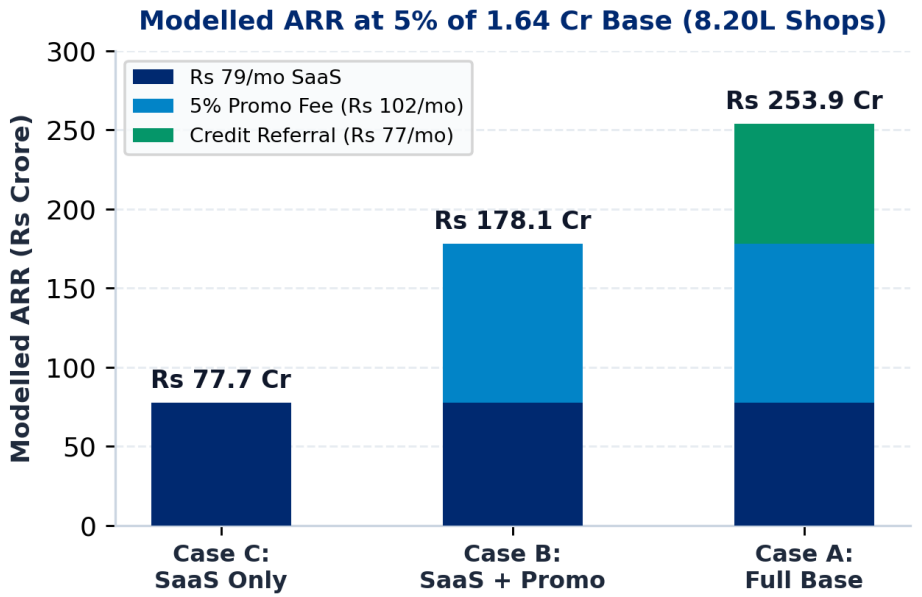

80/20 Power (155, ~4w)
46/arm at 50/50

Rs 5.00

Cached AI Cost/Mo
(Rs 28.80 Uncached)

Q2 FY27 ARR Cases, Fee Reconciliation & TTS Cache Sensitivity

- **Stream 1 (SaaS - Rs 79/mo):** Add-on to Soundbox (~Rs 90-100/mo rental ASSUMPTION) x 8.20L shops (5% of 1.64 Cr Q2 FY27 base) = Rs 77.7 Cr ARR.
- **Stream 2 (Promo Fee - Rs 102/mo):** 5% fee on ALL redeemed bills incl. organic returners: 1 wave = Rs 130.50 (Rs 2,610 bills); steady state assumes ~0.78 waves/mo (Rs 2,040/mo bills) = Rs 102/mo (+Rs 100.4 Cr -> Rs 178.1 Cr ARR).
- **Stream 3 (Credit - Rs 77/mo):** Amortized 1.5%-2.5% partner origination uplift (~7% loan pen. ASSUMPTION) -> +Rs 75.8 Cr (Rs 253.9 Cr ARR).
- **Cached COGS (Rs 48.00/mo):** Rs 1.80 SLM + Rs 3.20 TTS (~88% phrase cache hit on Bulbul v3) + Rs 43 msg = 81.4% gross margin.
- **Uncached COGS (Rs 71.80/mo):** Uncached Bulbul v3 (9k chars at Rs 30/10k = Rs 27 TTS) = 72.2% margin (39.2% cached margin on SaaS-only).

FEE & BASE RECONCILIATION

1. Fee Base: 5% applies to gross QR-redeemed promo bills including organic returners.

2. Cadence: Initial backlog wave yields Rs 130.50; steady replenishment (~0.78 waves/mo) yields Rs 102/mo.

3. Q2 FY27 Base: 5% x 1.64 Cr = 8.20L shops.

APPENDIX A9 : VALIDATION & ROLLOUT ROADMAP

From Stage-1 Verified MVP to Powered 50-Store Bengaluru Pilot

STAGE A : BUILT & TESTED (STAGE 1)

Deterministic Core & Safeguards

- FastAPI + per-visitor SQLite sandboxes (240 payers, 1,613 scans)
- ITT cap-vs-holdout, >10% alert, 25-thread concurrency & preflight
- Keyless Sarvam mock selftest (30% cap) + banned-jargon lint

STAGE B : DAYS 1 TO 30 PILOT

Bengaluru 50-Store Validation

- Complete 3-merchant native Kannada & Hindi teach-back review
- Pool ~4 weekly 80/20 waves (~31C + ~124T = 155; or 46/arm at 50/50)
- Advance only if net merchant profit post-fee & refusals has $p < 0.05$

STAGE C : PRODUCTION SCALE

Paytm Ecosystem Integration

- Bind Paytm QR dynamic coupon settlement & 4G Soundbox push
- Self-host compact intent models; keep >=88% audio phrase caching
- Scale across 8.20L target stores (Rs 77.7 Cr to Rs 253.9 Cr ARR)

PaytmAI VyaparVoice | Team SemiTechnical (Kevin Joseph)

Merchant Plain-Language View vs Technical Audit View (Task 14)

MERCHANT VIEW (ZERO JARGON - LINT VERIFIED)

- **Plain Outcome Copy:** Early check (run ~4 weekly waves to be sure): 12 of 32 customers with an offer came back vs 1 of 8 without.
- **Clear Spend Stop:** Your 300 rupee limit was reached after 12 paid redemptions (0 extra declined in base run).
- **Estimated Shop Profit:** At 30% shop margin, estimated profit is Rs 222 before Paytm fee (Rs 91.50 after 5% fee).
- **Draft Copy Honesty:** Kannada & Hindi carry visible [DRAFT - UNREVIEWED] badges until 3-merchant teach-back sign-off.

TECHNICAL & AUDIT VIEW (ANALYST / JUDGE)

- **ITT & Wilson 95% CIs:** 37.5% [22.9%, 54.8%] vs 12.5% [2.2%, 47.1%]; two-sided Fisher exact p = 0.24.
- **Power Calculator:** 80/20 split (r=4): 31C + 124T = 155 (~4 waves); 50/50 split (r=1): 46C + 46T = 92.
- **Cap Risk & Refusals:** Face exposure Rs 800; P(X > 12 | p=0.375) = 42.2% (>10% alert -> suggests Rs 400 cap).
- **Banned Merchant Terms:** Automated regex blocks cohort, holdout, p-value, Fisher, Wilson, ROI, DPDP, RFM, ITT.

GRADE A : OBSERVED LEDGER

SQLite store counts (240 payers, 1,613 scans, 48 silent -> 40 eligible; synthetic seed 20261025).

GRADE B : SIMULATED ITT

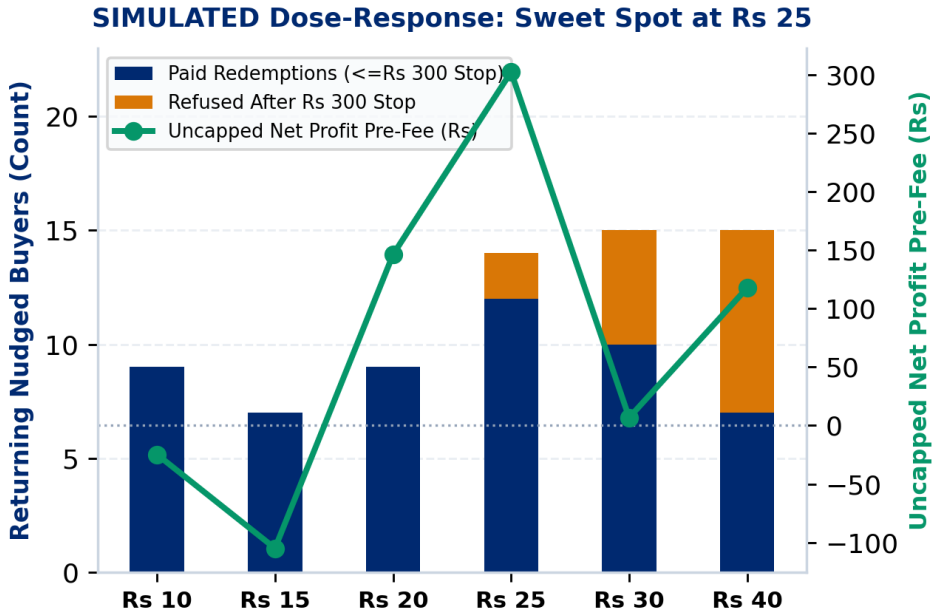

Randomized 32 vs 8 split, independent outcome draw, Fisher p & Wilson CIs (simulated).

GRADE C : ASSUMPTIONS

30% shop gross margin, 5% fee on redeemed bills, ~0.78 waves/mo steady cadence.

Merchant Spend Stop, Sarvam Credit Cap & Dose-Response Curve

- **Merchant Cashback Stop:** Issues passes to all 32 nudged buyers; atomic SQLite lock stops spend at Rs 300 (12 paid) and records cap_reached + refused_redemptions.
- **Dose-Response Sweet Spot:** In simulation, Rs 25 peaks uncapped profit: offers of Rs 30 to 40 erode uncapped net profit via organic subsidy AND trigger 5 to 8 cap refusals under a Rs 300 stop.
- **Shop Margin Break-Even:** On CMP-WINBACK-01, store breaks even at 17.2% gross margin pre-fee and 24.7% post-5%-fee; 30% darshini margin nets +Rs 91.50 post-fee.
- **Sarvam 30% Credit Ledger:** Separate JSON ledger caps TTS <=15% and STT <=15% (30% total of 500 sponsor credits = 150 max) and halts fail-closed on HTTP 402/429/5xx.
- **Public Cloud Lock:** PUBLIC_DEPLOY=true (auto-enabled on Render) hard-blocks live paid calls while SHA-256 audio cache replays at 0 credits.

DUAL CAP SUMMARY (SIMULATED & BUILT)

1. Merchant Cap: Protects shopkeeper pocket (Rs 300 stop; >10% overrun warning).

2. Sponsor API Cap: Protects hackathon credits (<=15% TTS, <=15% STT, fail-closed).
